

CLAIMS

What is claimed is:

1. An electric card fixture, configured to a circuit board for fastening said electric card, said electric card fixture comprising:
 - a base, said base has an opening and a joint portion disposed in one end of said base for being mounted on said circuit board;
 - a pivot member, pivotally connecting to the other end of said base, wherein said pivot member seals said opening of said base when being turned to a certain position.
2. The electric card fixture according to claim 1, wherein said base and said pivot member are made of metal, so that said electric card fixture can be connected to ground by means of said joint portion.
3. The electric card fixture according to claim 1, wherein said joint portion of said base is a lock member with a slot, by said slot, said lock member becomes two lock pieces and makes said joint portion work as a board lock.
4. The electric card fixture according to claim 1, wherein at least one mounted portion is disposed on a proper position nearby said joint portion.
5. The electric card fixture according to claim 1, wherein said joint portion of said base mounts said base on said circuit board by surface mounting technology.
